[MY CONSOLE](#)

Hello Robert,

We are writing to inform you that we will update the following **Gemini model aliases** starting **January 30, 2026** resulting in **Thought signatures** validation errors unless you take action:

- **gemini-pro-latest** to **gemini-3-pro-preview**
- **gemini-flash-latest** to **gemini-3-flash-preview**

We've provided additional information below to guide you through this change.

What you need to know

Thought signatures are encrypted representations of the model's internal reasoning. They are used to preserve reasoning context and ensure consistency across multi-step interactions. While these signatures were previously optional or handled automatically, the Gemini 3 models require explicit validation to maintain high-quality reasoning.

If you use the **-latest Gemini model alias**, thought signature validation will be enforced for all function calling as part of the model switch.

What you need to do

To prevent service interruptions when using Gemini 3 models, please ensure you pass back thought signatures to the model during function calling.

Starting **January 30, 2026**, failure to include these signatures will result in a validation error. For more information, please refer to our documentation on [Thought Signatures](#) with examples.

Impacted projects:

Your affected projects are listed below:

- [gen-lang-client-0323745083](#)

We're here to help

We understand that making this change may require some planning, and we're here to support you during this process.

If you have any questions or need help, please check our [product documentation](#) or visit the [Gemini AI community](#).

Thanks for choosing Google AI Studio and Gemini API.

– The Gemini API Team
